EDUCTOR NOZZLES

VENTURI AGITATION

WORKING PRINCIPLE

The Siebec agitation system with eductor nozzle uses the Venturi principle in order to amplify the volume of liquid delivered by a pump.

Each eductor nozzle can deliver up to 5 times the volume of liquid pumped.

Continuous solution movement is more efficient than air agitation and enables a homogeneous solution.

Eductor nozzles allow better fluid circulation in the tank which enables an enhanced control over the quality of deposition.

Venturi agitation delivers uniform bath temperature.

THE ESSENTIAL ROLE OF AGITATION SYSTEMS

ADVANTAGES

Prevents laminating
Avoids stagnation in the tank and disperses products and reagents

Dissipate the heat
Dissipate the heat from the cathode/electrolyte interface

Reduction of turbulences
Increases the deposition rate

Venturi principle
Multiplies by 5 the volume of liquid pumped

Optimizes deposition properties
Porosity, hardness, resistant to wear and tear

MATERIALS

Molded in one piece
In polypropylene, PVDF or Stainless steel

APPLICATIONS

Suitable for most applications
Electroplating, degreasing, cleaning, pickling, pre-treatment, paint stripping, anodizing, homogeneous solution, mixing, chemical makeup

EDUCTOR NOZZLES

ADVANTAGES

ELECTROPLATING / PRINTED CIRCUIT PLATING

Nickel - Copper - Zinc - Chrome - Gold - Silver & many other chemical processes

90 % LESS TOXIC FUMES

Reduced need for extraction and washing of gases to conform to standards

HOMOGENIZATION

Bath is more homogeneous in both temperature and concentration, in a way that is superior to air or mechanical agitation

ENHANCED CONDUCTIVITY

Reduction of electrical resistance thanks to the absence of air, preventing the loss of conductivity in the solution.

HEATING SAVINGS

Savings on the energy needed to heat the bath (air is responsible for about 25% of energetic losses) thanks to heat losses almost null because of the absence of emanations

IMPROVED WORKING ENVIRONMENT

Reduction of risks for operators and the surroundings

ALUMINUM ANODIZATION

LESS DEFECTS

No external air added which enables a better control over the process. No carbon dioxide dissolution from air = no air bubble retention in the hollow pieces + no formation of carbonates

REDUCED COOLING COSTS

Thanks to a uniform distribution of the temperature

METAL FINISHING

Alkaline cleaners - Phosphate tank - Paint stripper

LESS FILTRATION

Preservation of brighteners and components of the bath. Reduces the consumption of plating additives and sludge production

STEEL & AERONAUTICS

Acid pickling - Chemical Etching

LESS CLEANING

Reduction of equipment and infrastructure corrosion by eliminating airborne particles (unlike air agitation). Less cleaning needed around the tanks and electrical equipment

EDUCTOR NOZZLES

VENTURI AGITATION

A GOOD AGITATION IS LINKED TO THE FLOW VELOCITY GRADIENT AT THE EDUCTOR NOZZLE OUTLET

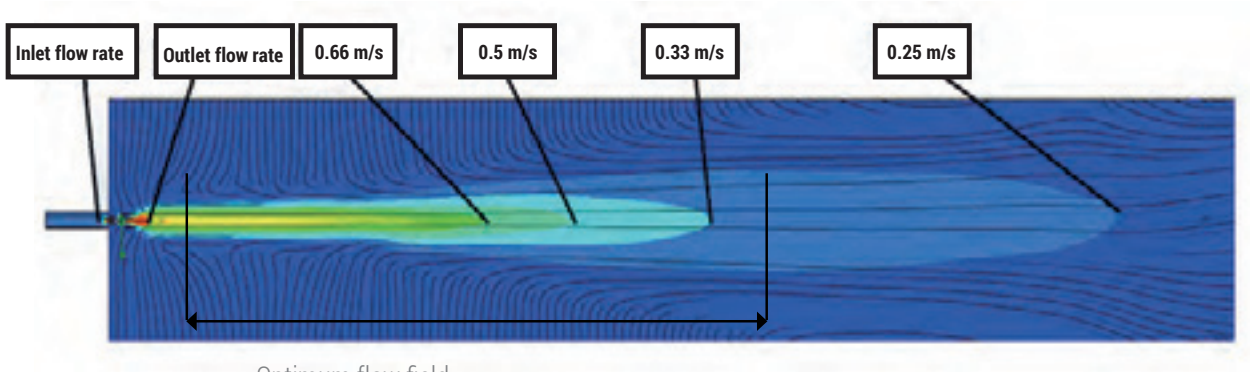
An efficient flow field for agitation in critical areas is defined by the minimum flow velocity going from 0.25 to 0.3 m/s depending on the application.
Mechanical agitation only reaches 0.15 m/s

PERFORMANCES

Eductor model	Flow rate	INLET PRESSURE (bar)								
		0.6	0.8	1	1.2	1.3	1.4	1.5	2	2.5
1/4"	Inlet airflow (m³/h)	0.75	0.85	0.94	1.03	1.07	1.1	1.18	-	-
	Outlet airflow (m³/h)	3.95	4.44	4.9	5.36	5.6	5.73	6.15	-	-
	Efficient flow field @ 0.33 m/s (m)	1.22	1.27	1.38	1.49	1.35	1.57	1.72	-	-
	Efficient flow field @ 0.25 m/s (m)	1.47	1.60	1.74	1.89	1.96	2.02	2.17	-	-
3/8"	Inlet airflow (m³/h)	1.30	1.74	1.8	2.0	2.07	2.14	2.2	2.55	2.77
	Outlet airflow (m³/h)	6.73	8.97	9.3	10.4	10.7	11.0	11.1	13.1	14.3
	Efficient flow field @ 0.33 m/s (m)	1.59	1.95	2.1	2.29	2.35	2.41	2.5	2.8	2.9
	Efficient flow field @ 0.25 m/s (m)	1.94	2.39	2.6	2.81	2.90	2.98	3.1	3.5	3.6
3/4"	Inlet airflow (m³/h)	2.71	3.42	3.6	3.95	4.11	4.26	4.4	5.1	5.6
	Outlet airflow (m³/h)	12.1	15.1	15.5	17.5	18.2	18.9	19.8	22.3	24.9
	Efficient flow field @ 0.33 m/s (m)	1.76	2.15	2.2	2.44	2.52	2.59	2.65	3	3.4
	Efficient flow field @ 0.25 m/s (m)	2.26	2.77	2.88	3.14	3.25	3.36	3.5	4	4.6

Simulation conditions : eductor nozzles in 20°C - 1cP water
Values vary depending on the characteristics of the bath and pressure losses of the system.

FLOW VELOCITY GRADIENT («FEATHER»)



Optimum flow field

EDUCTOR NOZZLES

VENTURI AGITATION

HOW TO CALCULATE AN EDUCTOR NOZZLE SYSTEM PROPERLY ?

1 THE NUMBER OF EDUCTOR NOZZLES

The number of eductor nozzles is determined by the total length of the tank and the typical recommended spacing between eductors according to the table at the bottom of the page.

2 THE SIZE OF EDUCTOR NOZZLES

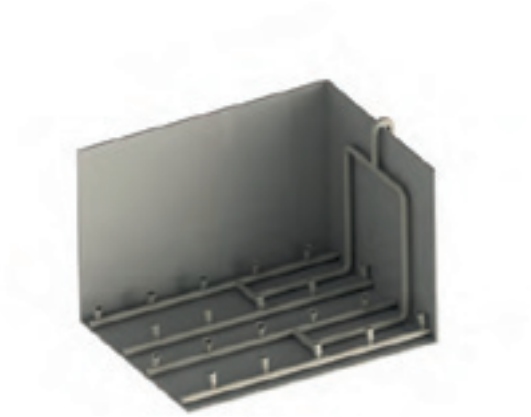
The size of eductor nozzles is determined by the size of the tank and the space available.
Tanks under 300L are often equipped with 1/4" eductor nozzles
Larger tanks are usually equipped with 3/8" eductor nozzles and deep tanks can be equipped with 3/4" eductor nozzles.

3 PIPING DESIGN

The design of the manifold must ensure good movement of solution within the bath and prevent direct impingement when electroplating. Stripping or cleaning applications can handle stronger turbulences directed at the product being treated.

4 SIZE OF THE PUMP

The size of the pump is calculated depending on the number and size of the selected eductor nozzles, the depth of the tank, as well as the piping.



H LAYOUT

O LAYOUT

Modeling of eductor nozzles layout in a treatment bath

Eductor size	Recommended center distance (mm)
1/4"	200
3/8"	300
3/4"	400

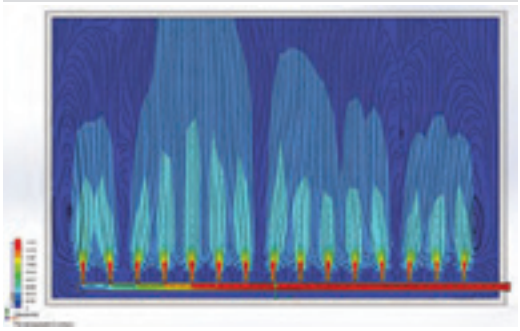
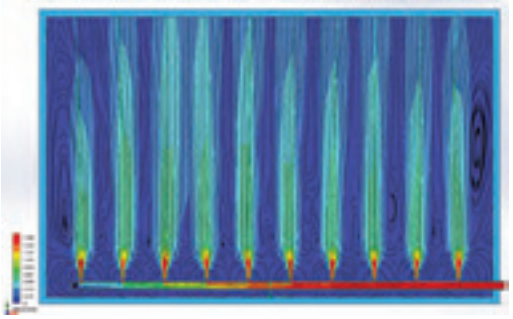
OPTIMIZATION OF YOUR AGITATION SYSTEM

We can help you in the calculation of the number and size of the eductor nozzles and design the installation of your agitation system.
Our flow simulation software allows us to reach an optimized agitation in your tank.

Before optimization



After optimization



SIEBEC pump M390 | Height of the tank : 2 m | Eductor nozzle : 3/8"

EXAMPLE : SIMULATION OF SAVINGS

Your Engineering Plastics Experts

Our experts can provide complete solutions to your fluid handling problems. We are highly knowledgeable about the various types of engineering plastics available, and we can help you determine what materials or products are best suited for your specific process. We can manage the project for you, from start to finish, or we can advise you on certain aspects of your project.

Our Expert Services Include:

- Product Selection
- Material Selection
- Specification Assistance
- Engineering and Design
- Technical Support
- Plastics Testing
- Consulting Services
- Project Management
- Feasibility Studies

Complete Filtration Systems for Your Plating and Industrial Applications

Specialty Plastics SIEBEC offers Complete Molded Filtration Systems—made with PP or PVDF—featuring superior corrosion resistance for your plating and industrial applications. SIEBEC systems have provided solutions in applications for over 60 years worldwide.
